“MAKE THE CHANGE”

VihtaVuori **SALE**

Get **R100**

OFF! with your first purchase of VihtaVuori powder!!

PREMIUM PROPELLANTS

With the recent developments with the local powder supplier not been able to supply powder until 2020, we as the VihtaVuori Representatives would like to help you, our avid shooter to make a change to VihtaVuori.

We understand that changing to a new powder comes at a cost, so we have agreed with selected dealers that we will offer you an additional R100.00 off your first purchase of a VihtaVuori powder.

We have also made some significant investments to ensure we can supply the local demands of our market and more importantly, we have significant orders in with VihtaVuori Finland, which are on their way to us.

SO, why use VihtaVuori?

• VihtaVuori has one of the widest range of powders (28 premium powders in the range) so you should definitely be able to find one that will suit your requirement. Currently we are running the:

-300 Series : ideal for all handguns

-100 Series : a single base powder with a low flash point temperature which is great for shooters that participate in high tempo shoots

-500 Series : when you are looking for the ultimate performance with low pressures, the 500 Series is your go to powder.

• VihtaVuori is extremely **Temperature Stable** which is very important for most shooters in South Africa, where you can experience single digit temperatures in the morning and high 20 to 30 degree Celsius in the afternoon. If you do not have a temperature stable powder you will notice vertical variations in your point of impact. In a recent test conducted by VihtaVuori for one of the EU military units they tested a 300 Norma Mag, with VihtaVuori N565 from -20 degree Celsius to 52 degree Celsius (a 72 degree Celsius variance) with a resultant extreme spread of only 8m/s !

• VihtaVuori add a special **Decoppering Agent** to their powders which keep the barrels cleaner for longer and ensure more consistent muzzle velocity and an increase in prolonged accuracy. VihtaVuori conducted a test under laboratory conditions, using the same control rifle, with the same loads, over 100 rounds. The test with the anti-fouling additive increased accuracy by 62% (77mm to 30mm) and decrease extreme muzzle velocity spread by 55% (11f/s to 5f/s) over the 100 shots.

• VihtaVuori is manufactured under one roof, which means the powder batches are extremely **Consistent Lot-to-Lot**. In various tests conducted, including one conducted independently by Man Magnum Magazine we have found the batch variation to be very small and well within their specifications.

• VihtaVuori is a **Clean Burning** powder. VihtaVuori only use the best raw materials in the production of their VihtaVuori powders which produces a very pure and clean burning powder. This allows longer shooting sessions between cleans, greatly reduces carbon build up and powder fouling, ultimately extending barrel life.

Enjoy your shooting!

Should you have any queries please do not hesitate to contact your nearest dealer or us on:

Dick Myburgh: 074 140 0583 (Mpumalanga, North West, Limpopo, Gauteng.)

Bianca Steenekamp: 061 466 9051 (Free State, Northern Cape, Eastern Cape, Western Cape, Kwazulu-Natal.)
